040.30	M16 WASHER Ø18 HOLE	L1UK / PCSF / 05

NOTES

- Barrier set back should be determined in accordance with TD27/05 and the contract specification. In instances where the set back is less than 1500mm, the system height should be measured from the edge of the paved area (Hard-Shoulder or Running Lane) where the set back is greater than 1500mm, the system height should be measured from the local/adjacent ground level as per standard NPSBS systems.
- Posts are to be installed with the closed face of the channel against the beam.
- When tying into adjacent VRS, only one working width difference is permitted.
- For minimum length of Full Height VRS, refer to Pass & Co UK manual section 2.6.
